

## Introducing the Inato Verified Commitment

# We take the risk. You take the reward.

Inato's evidence-based enrollment targets allow you to confidently partner with previously untapped, community-based sites. Expand your trial's geographic reach, accelerate startup timelines, and increase patient access, all without added risk.

### THE PROBLEM

Today, sponsors have little visibility into the process sites use to create enrollment estimates. This means two sites committing the same number of patients could prove to have wildly different results. So how do you know which one to select? That's where the Inato Verified Commitment comes in.

### HOW DOES IT WORK?

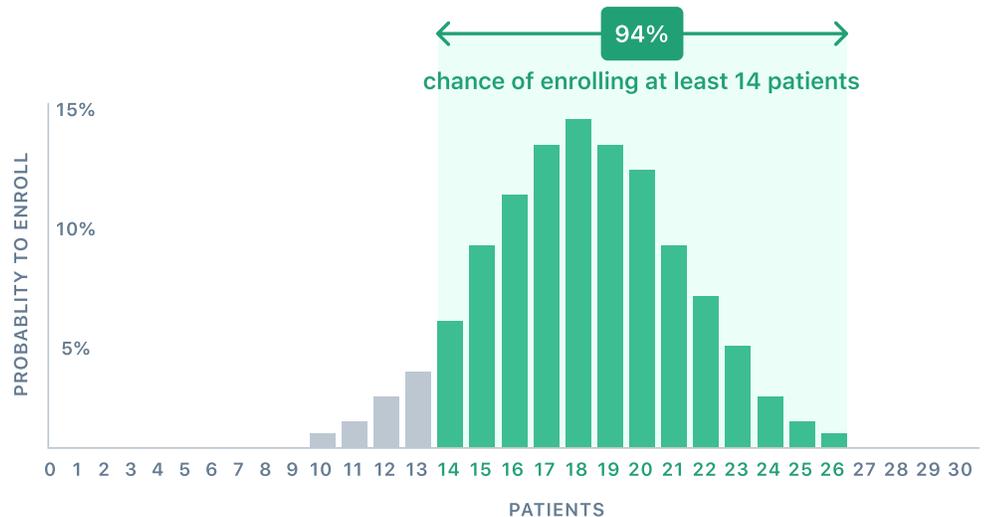

- 1 A site reviews & selects the trials that best meet their needs and complete an enrollment plan
- 2 Inato's Site Partnership Managers conduct interviews to understand all estimates and confirm the site can successfully meet all protocol criteria
- 3 Inato partners with sites to collect evidence (including EHR or CTMS extracts, or pre-screening logs)
- 4 Inato works with the site to refine its enrollment estimate based on study criteria, planned (or actual) screen-failure rates, site experience, and activation and recruitment timelines
- 5 The sponsor receives a finalized Inato Verified Commitment

## The proof behind the prediction

Inato conducts a probability analysis to determine the likelihood that the site can enroll any number of patients.

Sites are only backed with our Inato Verified Commitment when we are at least 80% confident that they will achieve their enrollment goals.

### Enrollment projection with a 55% screen failure rate

## Your reward: Predictability

Take the guesswork out of your study planning with IVC. We believe so strongly in our commitment that our enrollment fees are 100% at-risk - you only pay when the site performs.

Confidently expand your trial's impact today. Email [contact@inato.com](mailto:contact@inato.com).
